DIGITAL LITERACY PROJECT REPORT

Name: B RAJESH

Reg No: 25MIM10144

Branch: Integrated Mtech AI

Year: 2025 Batch

Course Code: CSE0001 – Digital Literacy

Date: (30/03/2026)

Introduction:

In the modern digital era, digital literacy has become an essential skill for students to succeed both academically and professionally. This project was undertaken as part of the Digital Literacy course to understand and apply key digital competencies such as building an online presence, using digital platforms effectively, maintaining professional communication, and ensuring online safety.

As a Student Digital Ambassador, the objective of this project is to guide peers in navigating the digital world responsibly and efficiently. Through five different tasks, I explored tools such as Canva, GitHub, LinkedIn, and Google Forms. These tasks helped me develop skills in content creation, portfolio building, coding practice, professional communication, and cyber safety awareness. Overall, this project enhanced my practical knowledge and confidence in using digital technologies.

Task 1 – Infographic Write-up

In Task 1, I created a digital literacy awareness infographic using Canva. The infographic aimed to explain the meaning and importance of digital literacy in a simple and visually engaging way. It included topics such as safe internet practices, useful digital tools, and maintaining a professional online presence.

I used clear headings, icons, and minimal text to make the infographic easy to understand. Key examples included using strong passwords, avoiding suspicious links, and utilizing platforms like GitHub and LinkedIn for career growth.

While designing the infographic, I explored Canva's templates, colour combinations, and layout features. One challenge I faced was balancing content and design to avoid overcrowding. This task improved my creativity and taught me how to present information effectively through visuals.

Task 2 – Digital Portfolio Write-up

In Task 2, I created and updated my professional profiles on platforms such as GitHub, LinkedIn, and Stack Overflow. These platforms are important for showcasing skills, building networks, and gaining knowledge.

On GitHub, I created a repository and added a profile README with my academic details. GitHub is useful for managing and sharing projects. On LinkedIn, I updated my education details and profile information, which helps in networking and exploring career opportunities. On Stack Overflow, I created a profile to participate in programming discussions and learn from others.

In the coming years, I plan to use GitHub for uploading projects, LinkedIn for networking, and Stack Overflow for improving technical knowledge. This task highlighted the importance of maintaining a professional digital identity.

Task 3 – Platforms Write-up

In this task, I explored coding practice platforms and collaboration tools. I created an account on Hacker Rank and completed a beginner-level coding challenge, which helped improve my logical thinking and problem-solving skills.

For collaboration, I created a Google Form titled "Digital Literacy Awareness Quiz." It included multiple-choice and short-answer questions to assess students' understanding. I also analyzed responses using Google Sheets, which helped me understand data collection and analysis.

This task was highly useful as it introduced tools essential for both academic and professional purposes. Coding platforms enhance technical skills, while tools like Google Forms are valuable for surveys and data handling.

Task 4 – Email Etiquette Write-up

In this task, I learned the importance of professional email communication. I created two emails: one requesting an assignment deadline extension and another expressing interest in a summer internship.

I focused on key elements such as a clear subject line, formal greeting, polite tone, and proper closing. I also understood that poor email communication, such as using informal language or missing subject lines, can create a negative impression.

This task improved my ability to write clear, concise, and professional emails. These skills are essential for effective communication in academic and professional environments.

Task 5 – Cybercrime Write-up

In Task 5, I studied cybercrime awareness, focusing on phishing and online fraud. I learned how cybercriminals use fake emails, messages, and websites to trick users into revealing personal information.

One surprising aspect was how realistic phishing attempts can appear, making them difficult to identify. This highlighted the importance of being cautious while using digital platforms.

As a result, I will be more careful when clicking links, sharing personal data, and making online transactions. I will also use strong passwords and enable two-factor authentication. This task increased my awareness of online safety and responsible digital behaviour.

Conclusion:

This Digital Literacy Project provided valuable insights and practical experience in using digital tools effectively and responsibly. I developed skills in visual communication, professional networking, coding practice, email etiquette, and cyber safety.

Each task contributed to enhancing my technical abilities, communication skills, and awareness of digital risks. The project also emphasized the importance of maintaining a

positive digital footprint. Overall, this experience has prepared me to use digital technologies more confidently and responsibly in my academic and professional journey.
